EXPERIENCE

Backend Developer (Intern)

Jan 2025 – Jun 2025

Jetstar

Melbourne, VIC

- Built a fault-tolerant, idempotent **SonarQube**→**Jira** proof of concept in **Python** on raw **REST APIs**, routing a 3,000-issue code-quality backlog onto the squad boards developers already work from.
- Remediated **Veracode** static-analysis findings in production **C#** services, resolving insecure cryptographic functions and unsanitised input handling against **OWASP Top 10** patterns, having picked up the language during placement.
- Delivered full-stack contributions: **JavaScript** frontend fixes for booking flows, and automation scripts (**GitHub API**) for data extraction and housekeeping.

IT Technician

May 2021 – Dec 2022

National IT Solutions

Melbourne, VIC

- Administered **Microsoft 365** and **Azure AD/Entra ID** tenants for 50+ clients: user lifecycle and licensing, security groups, **Exchange Online** mailboxes, and **SharePoint** site provisioning and permissions.
- Standardised device onboarding in **Intune**, using hybrid **Azure AD** join for domain-bound Windows machines via **Azure AD Connect** and supervised iPad enrolment through **Apple Business Manager**, with compliance policies and app deployment.
- Maintained on-premises **Windows Server** estates behind the hybrid tenants: **Active Directory** objects and OU delegation, **Group Policy** for security baselines and drive mappings, and domain controller, **DNS**, and **DHCP** upkeep across client sites; mentored trainees.
- Optimised client licensing using **PowerShell** and **Excel**, delivering cost-saving recommendations to CTO and CEO.

SELECTED PROJECTS (AVAILABLE ON GITHUB)

Open Source Contributions

Java, Shell

- Diagnosed and fixed crashes and bugs for Mineplex, a 240,000-line **Java** Minecraft server codebase, and reduced cognitive complexity flagged by **SonarQube**. Also hardened the bootstrap installer of Dark Islands, a **VS Code** theme, with stronger error handling and temp-directory management.

Lobby

Svelte, TypeScript, Supabase

- Placed 3rd at MACATHON 2026 with a mobile-first platform for apartment residents to anonymously raise and upvote building issues; enforced resident/manager authorisation at the database layer with **Postgres** row-level security on **Supabase** Auth and Realtime.

QuickNote (WIP)

C, Win32, Claude Code

- Building a performance-first native Windows sticky-note app in **C** on raw **Win32/RichEdit** with live Markdown rendering to master agentic development with **Claude Code**.
